Austin, TX

SUMMARY

Senior Software Engineer with 10+ years of backend expertise spanning microservices, API design, and large-scale platform modernization.

Recognized by my employer for closing gaps created by attrition without prompting, improving system performance and profitability, resolving problems others avoided, mentoring developers to ramp up quickly.

Targeting roles in STEM, Data Science, or gaming where deep technical skill, team-first mindset and commitment to quality are essential.

CORE SKILLS

Languages:	Java, C#, JavaScript, Python, SQL
Frameworks:	Spring Boot (Reactive / WebFlux), ASP.NET, Node.js, React
Infrastructure:	Kubernetes, Docker, Linux, Azure
Databases:	Apache Cassandra, PostgreSQL
Practices:	Microservices, REST APIs, OAuth2 / SSO, Agile / Scrum, CI/CD, Root Cause Analysis
AI Tools:	GitHub, Copilot, ChatGPT
Leadership:	Technical mentorship, collaboration with sales and senior leaders, Scrum facilitation, productive team dynamics

PROFESSIONAL EXPERIENCE

Principal Java Developer • Everi Digital (now IGT/Everi) — Gaming 6/2021 – 3/2026

- **Platform Modernization:** Led a full-stack platform upgrade resulting in an 80% reduction in 95th percentile request latency. (Java 8 to 17, Spring Boot 2 to 3, Gradle 4 to 8, and Apache Cassandra 3 to 4)
- **Performance:** Cut compliance report generation from hours to minutes by designing Cassandra roll-up tables, directly enhancing game server reliability and meeting Nevada Gaming Commission standards.
- **Code Quality:** Eliminated thousands of lines of duplicate configuration by refactoring the entire game-server application configuration layer.
- **API Development:** Implemented and maintained reactive backend APIs (localization, report generation, checksum validation) using Spring Boot WebFlux.
- **Leadership:** Commended by management for seamlessly assuming senior responsibilities during sudden staff transitions, maintaining team continuity and meeting deadlines.
- **Mentorship:** Trained, mentored, and formally evaluated new-hire developers; built working relationships with project managers and sales/marketing team members.

Software Engineer • VisionWeb (now Helix) — Vision/Healthcare 4/2020 – 12/2020

- Modernized a legacy C# .NET 2 codebase to .NET 3.1, enabling Docker container health checks and live monitoring across Kubernetes clusters.
- Delivered JavaScript and ASP.NET feature enhancements to the internal administration tool.

Software Engineer • TrustRadius — SaaS / Analytics 6/2018 – 2/2020

- Built a web-traffic data reporting pipeline (PostgreSQL, Node.js) with deep nested-query optimization, significantly reducing query execution time.
- Created a Python Slack bot enabling the customer-success team to self-serve custom reports, reducing ad-hoc engineering requests.
- Designed a React application for user and contract management, improving operational efficiency for customer-success staff.
- Implemented OAuth2 Single Sign-On, giving enterprise customers fine-grained access control over the product.

Software Engineer • Kantar — Market Research 10/2016 – 4/2018

- Developed C# and SQL APIs for Questionnaire DB (a market-research fielding tool) and built the associated JavaScript front-end components.
- Enhanced DPAT (a survey-monitoring data API replacement); configured Azure authentication and key-store management.

EDUCATION

B.S. Computer Science • The University of Texas at Austin May 2016

Relevant coursework: Data Structures • Honors Computer Architecture • Honors Operating Systems • Compilers • Programming Languages Security & Privacy • Autonomous Intelligent Robotics • Mobile App Development

Other Studies: Abstract Mathematics • Physics • Ethics • Rhetorical and Technical Writing
